PRODUCTION CONTROL SOFTWARE

BluMentis

ProLine Analytics

Total control. Guaranteed quality.

On industrial assembly lines, a single out-of-spec parameter detected too late means rework, scrap, and warranty claims. ProLine Analytics turns every process data point into real-time operational intelligence: continuous monitoring, predictive alerts, and full component traceability — all within your local network, with no data leaving the plant.

KEY VALUES

100%
Component traceability

24/7
Real-time monitoring

100%
Verified Supplier Data

< 30s
Detection latency

THE CHALLENGE

Non-conformities are caught too late — at the end of the line, or worse, by the customer. The root cause is almost always the same: fragmented visibility, spot-check monitoring, no predictive capability.

HOW IT WORKS

Process Digital Twin
A complete digital model of every product code: stations, parameters, tolerances. Fully configurable and adaptable to your existing line setup.

Data Integration
Read-only connection to your local MES, or direct import from CSV, Excel, and MDF files. Source data is never altered or put at risk.

Monitoring & Alerting
Continuous analysis of all operational parameters. Anomalies and drifts are flagged in real time via notifications and on-line acoustic/visual alarms.

Predictive Quality
Algorithms detect negative trends before they produce defective parts.

KEY BENEFITS

Fewer defects & less reworks

Early intervention cuts operational costs before anomalies result in NG products.

Consistent process stability

Continuous monitoring keeps the process permanently centered on quality targets.

Full traceability & supplier components verification

Full traceability for Automotive, Manufacturing & Industrial; end-to-end supplier component verification.

Privacy, security, Regulatory Compliance

All processed data stays exclusively within the local network. Nothing is ever transmitted outside the plant.

Request a demo and quantify the impact on your production plant.
